

Increase Productivity, Save Time

Run the store from the aisle.

Designed with the future of retail in mind, **EM Omnia's** powerful software allows you to **process orders, track inventory, receive orders and do stock takes, all while on the go.**

Built For Purpose Solution

As a fully integrated component of EM Cloud™ retail management system, EM Omnia has been developed with the next level of the retailer in mind. EM Omnia will deliver more than any PDE available on the market today by utilising Android OS to produce market-leading speed, accuracy, and performance and enable a whole range of features never before seen in handheld scanners.

Easy To Use

Today's staff wants a device that is as contemporary and easy to use as the smartphone they use every day. Retailers need a robust device that will last within a retail store's harsh environment, built to survive the store, and familiar enough that new staff pick it up in minutes.

The office
comes to the
shelf  **Cloud™**

Increase Efficiency

Designed to work across both the EM Cloud™ and EM Pos™ platforms, EM Omnia features all the functionality retailers have come to expect from Australia's leading retail software provider and developer, GaP Solutions.

With our EM Omnia on your hand held device:

Detailed product information.

Insert, set, and remove a preferred location, set small labels to flag, and adjust print and electronic shelf label and talker quantities.

Pricing and viewing active promotions.

Immediate sales history and view specials right from the device.

Order quantity and average weekly sales figures of each product.

Upcoming promotions as you order from the shop floor.

View location and facing information while you walk the shop floor.

Stock Management

Made Easy

Our Features

Price Verification

Check all selling prices, special prices from past, present and future promotions cost prices, etc. and make changes as required.

Orders

Check order info “at the shelf” and make optimum order decisions. Back to back order allows you to track outstanding orders whilst entering new orders.

Markdowns

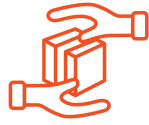

Apply % or \$ reductions and print a label containing all relevant data embedded in the barcode- only a single scan is required at the checkout.

Utilities

It contains various settings functions in which users can set their preferences.

Receiving

Receive items against the order or the invoice, updating stock on hand.

Out of Stock

Create a stock take of items that have zero items on the shelf, allowing users to view detailed information and update the inventory for these items.

Location Maintenance

View location & facing information while “at the shelf” and update as required. Change default shelf label or talker quantities for each location.

Auto Order Setup

This features lets you set rules about how a product might be ordered via the auto replenishment system in EM Cloud™ and view detailed information about the product.

Transfer

The function will allow you to view “Transferred Orders” between stores or warehouses and stores.

Stocktake

Increase efficiency by keeping the PDE’s on the shop floor. Scan, enter count and send. Recall and review counted items at any time.

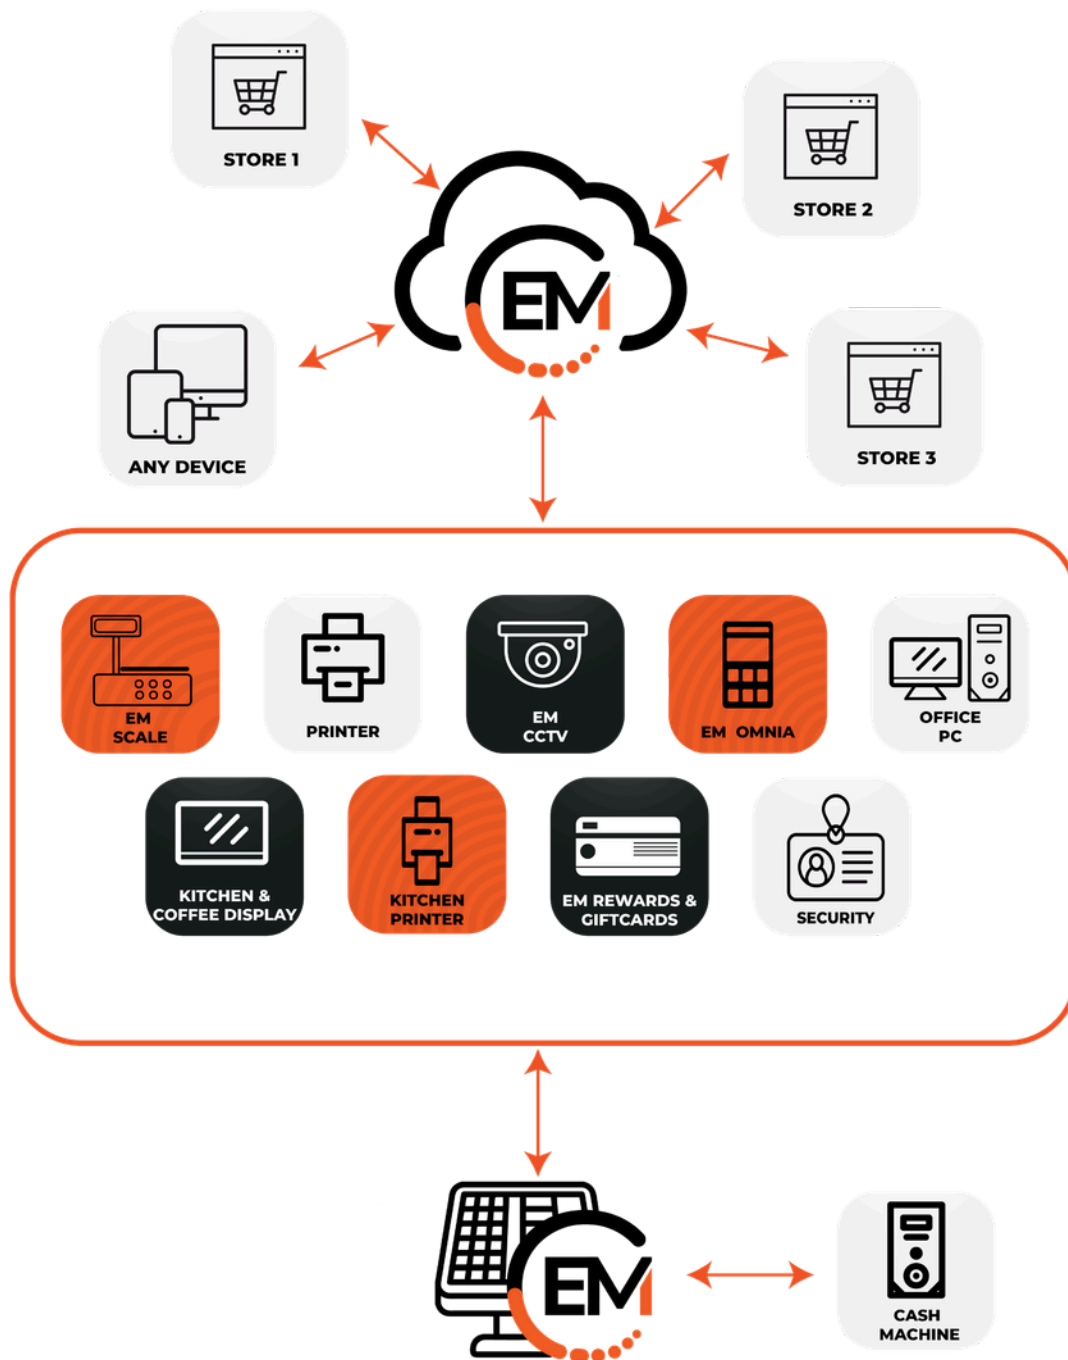

Dump Stock

Track shrinkage on all items disposed of or used in-store.
